space.

Features of the HD Rack:

- **40% more caging per square foot than conventional racking systems**
- Excellent cage viewing
- Ergonomic handles
- Cages locked in place
- All welded, stainless steel construction
- Compatible with auto water systems
- Available in several styles to accommodate many standard cages
- Increased airflow compared to solid shelves

Cages are held in place with approximately 3/16" between cages. Our shelf-less design allows minimal vertical distance between rows. Cages are held securely in place, unable to slide from front to back or from side to side. This design allows it to be easily outfitted with either traditional water bottles or with the automated watering systems of your choice.
