TechTrak Flooring

WHAT DOES IT DO?	TechTrak removes dirt and particles from feet and wheels in a completely passive manner. No covers, no dips, no spraying and no sticky mats. Just walk.
HOW DOES IT WORK?	<p>TechTrak has a liquid smooth surface, which allows greater contact with each layer of contamination from feet or wheels. The high tack surface is slightly conforming, which allows a concentrated loading of particles and remains effective after continuous overstrikes in the same traffic area.</p> <p>The secret is in the length. A 10' length would allow for multiple foot-falls, and is sufficient for low-medium usage areas. High traffic areas would require longer lengths.</p>
WHY DO WE NEED IT?	Because cleanliness counts. By utilizing TechTrak, you will minimize the amount of dirt and contamination entering your facility, and thereby help to maintain an appropriate barrier.
WHERE SHOULD WE USE IT?	<ul style="list-style-type: none">• All entrances and exits (animal holding areas, quarantine rooms, laboratories, etc.) to prevent the ingress of contamination.• In corridors, anti-rooms, airlocks, and others to eliminate cross contamination.• Shipping/Receiving areas.• Anywhere Specific Pathogen Free (SPF) housing conditions are important
WHAT MAINTENANCE IS REQUIRED?	The only maintenance required is regular cleaning to remove dirt and rejuvenate the surface. Standard detergents can be used if mixed to manufactures' specifications. Of course, you should always test these in an inconspicuous area.
HOW MUCH DO WE NEED?	<p>We recommend at least 10 linear feet in open areas. Less can be used in more confined spaces, or more may be required in high traffic areas. We can help you figure this out.</p> <p>Standard widths are 4' or 6'6", however mats can be trimmed or seamed together to fit custom areas.</p>
HOW LONG WILL IT LAST?	TechTrak comes with a full, three-year warranty, and an expected 5 year life-span. The only maintenance required is regular cleaning to remove dirt and rejuvenate the surface.
